

GBD Results Tool User Guide

This document provides a basic guide for using the GBD Results Tool. The tool allows retrieval of GBD 2017 results for deaths, years of life lost (YLLs), years lived with disability (YLDs), disability-adjusted life years (DALYs), prevalence, incidence, maternal mortality ratio, life expectancy, healthy life expectancy (HALE), summary exposure value (SEV) and healthcare access and quality index (HAQI).

The tool can return results both as a visualization (a web-based data table with line charts) and as a CSV file. The CSV file is downloadable from the tool's user interface.

The web-based data table displays rounded figures. For most queries, complete results with full precision are only available via download.

Accessing the tool

In Internet Explorer 11 or above, Google Chrome, or Firefox browsers, go to: <http://ghdx.healthdata.org/gbd-results-tool>

Forming a Query

Specify your query parameters using the tool's controls. Results display in the table and charts below the controls.

Useful tips for querying the data

To view death results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “Deaths” in the Measure drop-down

To view DALYs results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “DALYs” in the Measure drop-down

To view YLDs results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “YLDs” in the Measure drop-down

To view YLLs results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “YLLs” in the Measure drop-down

To view prevalence results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “Prevalence” in the Measure drop-down

To view incidence results:

- Select “Cause” in the Context drop-down
- Select a cause in the Cause drop-down
- Select “Incidence” in the Measure drop-down

To view maternal mortality ratio results:

- Select “Cause” in the Context drop-down
- Select a relevant cause in the Cause drop-down
- Select “Maternal mortality ratio” in the Measure drop-down

To view life expectancy results:

- Select “Life Expectancy” in the Context drop-down
- Select “Life expectancy” in the Measure drop-down
- Select “Years” in the Metric drop-down

To view HALE results:

- Select “HALE” in the Context drop-down

- Select “HALE” in the Measure drop-down
- Select “Years” in the Metric drop-down

To view Summary exposure value (SEV) results:

- Select “SEV” in the Context drop-down
- Select a risk in the Risk drop-down
- Select “Summary exposure value” in the Measure drop-down

To view risk results:

- Select “Risk” in the Context drop-down
- Select a risk in the Risk drop-down
- Select “Etiology” in the Context drop-down
- Select an etiology in the Etiology drop-down

To view impairments results:

- Select “Impairment” in the Context drop-down
- Select an impairment in the Impairment drop-down
- Select “HAQI” in the Base
- Select “HAQI” in the Context drop-down

Downloading Results

Select the Download CSV button, and follow the download option prompts.

The screenshot shows a search interface with several filter sections:

- Base:** Single (selected), Change, Rank
- Cause:** Add/Remove (1)
- Year:** Add/Remove (1)
- Context:** Cause (selected), Risk, Etiology, Impairment
- Age:** Add/Remove (1)
- Measure:** Add/Remove (1)
- Location:** Add/Remove (1)
- Sex:** Add/Remove (1)
- Metric:** Add/Remove (3)

 At the bottom, there are three buttons: "Search", "Permalink", and "Download CSV". The "Download CSV" button is highlighted with a red rectangular border.

Figure 2. Download CSV button.

Large Results

Queries can produce large result sets. In these cases, the tool requires an email address and your choice to receive the download as one or multiple files. The maximum number of rows for a single file is 500000.

A request may take up to several hours to complete. You will receive a confirmation email with a link to a page where you may check the status of your request. When the process is complete, that page will contain the files’ download links. You will receive a second email confirming that your download is ready.

Notes/Issues

- While the GBD results tool can be very powerful for querying and downloading GBD results, including many search parameters may cause some issues. We recommend that you break your query down into smaller parts. For example, do not query all the locations at the same. A good rule of thumb would be to search for your results first and if you see the results in the data table, then to download them.
- The tool does not work with Internet Explorer versions 10 and earlier.
- Refresh the browser to clear all selections. To clear selections from any drop-down, click the “x”.

Figure 3. Clearing existing selections.

If you discover any issues not mentioned in this guide, please send a note to engage@healthdata.org.

Appendix: Troubleshooting

This troubleshooting appendix includes workarounds for some of the GBD Results Tool’s known issues.

Combining Multiple CSV Files

Sometimes, queries will return data in multiple CSV files. Each file will contain a segment of the data and have identical columns and a header row.

To combine multiple CSV files in Excel:

1. Open the first file in the set you want to combine in Excel.
2. Open the next file in the set.
3. Select all cells below the first line in this next file.
 1. Note: A simple way to do this is to select cell A2 (the first and leftmost data-containing cell) and press the following keys: Control + Shift + ↓ + →.
4. Copy the selected cells.
5. Paste the copied cells into the first and leftmost blank cell in the first file.
6. Repeat steps 2-5 until the data from all files has been copied into the first one.

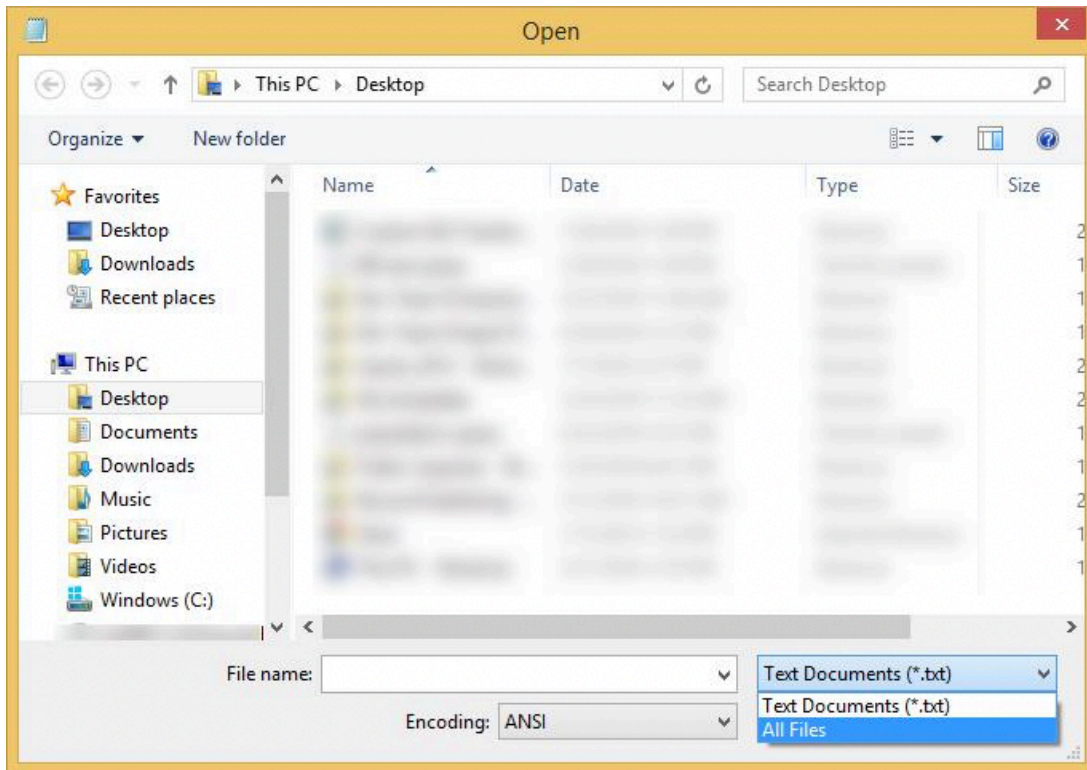

Opening CSV Files with Special Characters in Excel

Sometimes, queries result in files that contain special characters, such as place names with accents like “México.” These characters may not display properly when the CSV file is opened in Excel. To solve this problem:

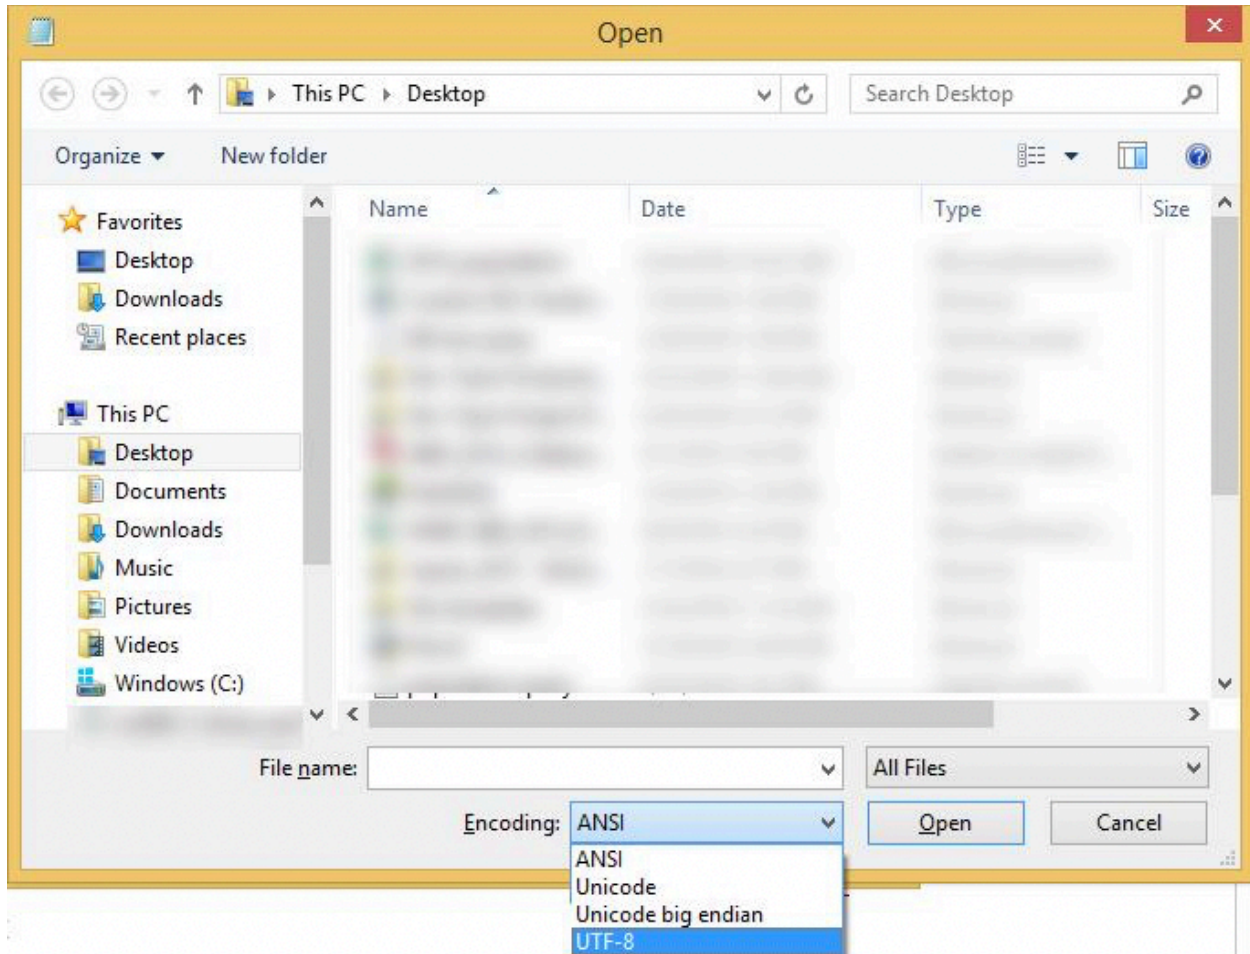

1. Open Notepad.
2. Click File > Open (Ctrl + O)

3. Browse to and open the exported CSV, making sure to select "All Files" in the bottom right.

4. In the Encoding drop-down menu at the bottom, change from ANSI to UTF-8.

5. Save the file. When you reopen it in Excel, the special characters should appear correctly.
