Data Release Information Sheet

Data Summary

Dataset name: Africa – Travel Time to Health Facilities and Viral Hemorrhagic Fever Outbreak Preparedness

Date of release: July 30, 2019

Summary:

Country profiles were created for 43 sub-Saharan African countries highlighting travel times to most accessible health facility from areas with Viral Hemorrhagic Fever (VHF) spillover event potential, travel times to the nearest at-risk location for VHFs, and an assessment of how travel times would change given new infrastructure in a country.

This dataset includes the following:

- Three PDF files per country:
 - Country-specific estimates of the travel times described above
 - Maps of the analysis stratified by facility type
 - Maps depicting the uncertainty around the modeled VHF spillover event potential estimates using differing thresholds
- One PDF of tables of the travel times to the nearest at-risk location for any VHF from all hospitals in a country
- Code files used to generate the estimates

Data Files Information

Thresholds used for the uncertainty analysis are as follows. The median value was used for each of the four VHF in all analyses except the uncertainty analysis.

	Median	5 th Percentile	95 th Percentile
Marburg	0.399	0.300	0.608
CCHF	0.019	0.014	0.025
Ebola	0.349	0.210	0.468
Lassa	0.396	0.339	0.443
